53 business leaders, including members of the World Economic Forum and its International Business Council (IBC), have committed to the core Stakeholder Capitalism Metrics

Mumbai, January 26th, 2021: Along with a growing coalition of business leaders across industries, Mahindra Group announced its commitment to implement the Stakeholder Capitalism Metrics. These are a set of environmental, social and governance (ESG) metrics and disclosures released by the World Economic Forum (WEF) and its International Business Council (IBC) that measure the long-term enterprise value creation for all stakeholders.

Of the commitment, **Anand Mahindra, Chairman, Mahindra Group**, says, "Purpose driven businesses are likely to be more resilient than those that do not embrace people and planet. Investors recognize that. We support World Economic Forum's effort to standardize reporting through the development of comprehensive ESG metrics and believe that this will be a step forward for a sustainable world."

The Stakeholder Capitalism Metrics, drawn from existing voluntary standards, offer a core set of 21 universal, comparable disclosures focused

on people, planet, prosperity and principles of governance that are considered most critical for business, society and the planet. They strengthen the ability of companies and investors to benchmark progress on sustainability matters, thereby improving decision-making and enhancing transparency and accountability regarding the shared and sustainable value companies create. These leaders and their organizations, including Mahindra, Dow, Unilever, Nestlé and Sony have committed to:

1. Reflect the core metrics in their reporting to investors and other stakeholders (e.g. annual report, sustainability report, proxy statements, or other materials) by reporting on the metrics most relevant to their business or briefly explaining why a different approach is more appropriate
2. Publicly support this work and encourage their business partners to do so
3. Promote the further convergence of existing ESG standards, frameworks and principles to support progress towards a globally accepted solution for non-financial reporting on common ESG metrics

In making these commitments, business leaders are signalling that ESG factors are increasingly critical to the success and long-term viability of all businesses. This clearly represents the intent from leading global companies to integrate sustainability into their core strategy, operations and corporate disclosures.

“Stakeholder capitalism becomes now really mainstream,” said **Klaus Schwab, Founder and Executive Chairman, World Economic Forum.**

“The public commitments from companies to report not only on financial matters but also their ESG impacts are an important step towards a global economy that works for progress, people and the planet.”

Intentionally built around existing standards - CDP, the Climate Disclosure Standards Board (CDSB), the Global Reporting Initiative (GRI), the International Integrated Reporting Council (IIRC) and the Sustainability

Accounting Standards Board (SASB), these metrics include themes like quality of governing body, stakeholder engagement, ethical behavior and risk & opportunity oversight. By adopting and reporting on these metrics and disclosures, the business community will continue to catalyze greater cooperation and alignment among existing standards and encourage progress on the development of a systemic, globally accepted set of common standards for reporting on sustainability performance.

Mahindra Group has been publishing Sustainability Reports based on Global Reporting Initiative (GRI) framework, considered the gold standard globally on reporting, for the last twelve years. Mahindra & Mahindra has been publishing Integrated Report on the International Framework for the last three years. These are globally multi award- winning reports.

About the Measuring Stakeholder Capitalism Initiative

In August 2019, at the request of its International Business Council, the World Economic Forum collaborated with Deloitte, EY, KPMG and PwC in a project to identify a set of universal metrics and disclosures – Stakeholder Capitalism Metrics – deliberately drawn from existing standards, focused on the four themes of Principles of Governance, Planet, People and Prosperity. In September 2020, following a six-month consultation process with over 200 companies, investors and interested parties, the project published a refined set of 21 core and 34 expanded metrics and disclosures in its report *Measuring Stakeholder Capitalism: Towards Common Metrics and Consistent Reporting of Sustainable Value Creation*. The Stakeholder Capitalism Metrics Initiative seeks to improve the ways that companies measure and demonstrate their performance against environmental, social and governance (ESG) indicators and to enable positive contributions towards achieving the Sustainable Development Goals (SDGs). The project's twin objectives are to accelerate convergence among the leading

private ESG standard-setters and to bring greater comparability and consistency to the reporting of ESG disclosures.
