		The fair-value of the stock options granted under 2010 Scheme have been calculated using Black-Scholes Options pricing formula and the significant assumptions made in this regard are as follows:						
	(a) weighted-average values of:							
	(i) share price (Rs. Per Share)	2,928.80	3,199.40	3,199.40	3,487.20	3,609.60	3,609.60

	(vii) any other inputs to the model	NIL						
(b) The method used and the assumptions made to incorporate the effects of expected early exercise	The Company has estimated the expected life of the options on the basis of average of minimum and maximum life of the Options. Historical data is not considered in expected life calculations.							
(c) How expected volatility was determined, including an explanation of the extent to which expected volatility was based on historical volatility	Volatility is the measure of the amount by which a price has fluctuated or is expected to fluctuate during a period. The measure of volatility used in the Black-Scholes options pricing model is the annualized standard deviation of the continuously compounded rates of return on the stock over a period of time. For calculating volatility, the daily volatility of the stock prices on the National Stock Exchange of India Limited, over a period prior to the date of grant, corresponding with the expected life of the options has been considered.							
(d) Whether and how any other features of the option grant were incorporated into the measurement of fair value, such as a market condition	No other feature has been considered for fair valuation of options except as mentioned in this table at point (a) above.							
O.	Disclosures in respect of grants made in three years prior to IPO under each ESOS	Not applicable
